EXECUTIVE SUMMARY

The following is a summary of the All Hazard/Pre-Disaster Mitigation Plan, which has been prepared in fulfillment of the requirements of the Pre-Disaster Mitigation (PDM) Grant agreement, between the New York State Emergency Management Office (SEMO) and Sullivan County. The planning process followed was in accord with the 44 Code of Federal Regulations described in Section 201.6 of the regulations entitled “Local Mitigation Plans”. Hence, the process followed included but was not limited to the following key elements:

- Documentation of the Planning Process
- Risk Assessment
- Develop a Mitigation Strategy for Reducing Potential Losses
- Description of Pre-Disaster Mitigation Goals
- Providing a Plan of Action
- Public Participation
- Continued Maintenance of the Plan

The Sullivan County All Hazard/Pre-Disaster Mitigation Plan was prepared by the County’s Division of Public Works under the supervision of the County’s Hazard Mitigation Coordinator, in conjunction and as a sub-committee effort of the County’s Comprehensive Emergency Management Planning/Local Emergency Planning Committee (SCEMP/LEPC).

The committee which provided input to the Plan was comprised of the heads of each Town and Village (Supervisors and Mayors), along with numerous other Town and Village officials. In addition, public input was obtained and incorporated through Town and Village Board Meetings and several special meetings held by the County.

The purpose of the plan was to develop a strategy and action plan for the implementation of Pre-Disaster mitigative measures to help reduce future losses due to natural and man-made hazards. On the basis of assessment of risks with respect to those that have had the most severe and repetitive impacts on the community, the Plan has identified goals and actions to be taken to reduce losses. In particular at this time to obtain the greatest degree of improvement using the limited resources that are available (biggest bang-for-the-buck), the following goals have been recommended:

- ✓ Reduce Impact of Ice Storms
- ✓ Reduce Impact of Winter Storms
- ✓ Reduce Impact of Floods
- ✓ Reduce Impact of Tornadoes
- ✓ Reduce Impact of Man-Made Hazards
 - Power Outage
 - Structural Fire
 - HAZMAT

Details as to parties responsible for implementing action are described within the plan. It is important to know that hazard mitigation is an evolving process. To this end the actions recommended in the Plan will address the most frequent and damaging events which include: **Ice Storms, Winter Storms, Floods, Tornadoes, and the Man-Made hazards of Power Outage, Structural Fire and HAZMAT.** In addition as the planning process has identified the need for more data and information concerning vulnerability of critical facilities, this has also been included in the recommendations for moving forward with productive actions towards decreasing future losses.

This plan has been adopted by the County of Sullivan and all of the multi-jurisdictional entities which include the:

Towns

Bethel
Callicoon
Cochecton
Delaware
Fallsburg
Forestburgh
Fremont
Highland
Liberty
Lumberland
Mamakating
Neversink
Rockland
Thompson
Tusten

Villages

Bloomington
Jeffersonville
Liberty
Monticello
Woodridge
Wurtsboro

Copies of the instruments/resolutions for adoption can be found in Appendix E.

INTRODUCTION

The purpose of this Pre-Disaster Mitigation (PDM) Plan is to effectively reduce future disaster damages, public expenditure, private losses and a community's vulnerability to natural and man-made hazards. This plan provides an opportunity for Sullivan County, in conjunction with the communities that make up the County, to develop a comprehensive All Hazard-Pre-Disaster Mitigation Plan, which can be its best insurance against the impacts and costs of future disasters.

The Sullivan County Databook, prepared in December of 2002 by the Sullivan County Division of Planning and Community Development, states that Sullivan County was established through an act of the New York State Legislature on March 27, 1809. Over the recent decade, Sullivan County has seen its population increase from 69,277 persons in 1990 to 73,966 in 2000, a 6.8% increase. This makes Sullivan County one of the fastest growing counties in the State of New York. The County has a land area of 1,011 square miles and is located just beyond the New York metropolitan region. The terrain is generally hilly, with higher elevations in the northern portion of the County, ranging from 460 to over 3,000 feet above sea level.

Sullivan County is comprised of fifteen (15) Towns inclusive of the Towns of: Bethel, Callicoon, Cohecton, Delaware, Fallsburg, Forestburgh, Fremont, Highland, Liberty, Lumberland, Mamakating, Neversink, Rockland, Thompson and Tusten; and six (6) Villages namely: Bloomingburg, Jeffersonville, Liberty, Monticello, Woodridge, and Wurtsboro. In terms of the land area of Sullivan County, the Town of Mamakating

is the largest with 100.0 square miles in total area, almost one-tenth of the total area of the County. While the Town of Delaware is the smallest town with a total area of 35.1 square miles and making up only 3.5% of the total area of Sullivan County. Appendix A titled, "Land Area, Sullivan County, New York", is added to the appendices to provide the total area (in square miles), acreage, and percent of the total County for each Town of Sullivan County.

The intentions of this plan are to meet the New York State and Federal requirements. Both Sullivan County and the Towns & Villages of Sullivan County will benefit from the planning and hazard mitigation grants that will aid in the implementation of the proposed ideas contained within the All Hazard/Pre-Disaster Mitigation Plan. The following are key documents which authorize and provide guidance for the preparation of this plan:

- Robert T. Stafford Disaster Relief and Emergency Assistance Act, Public Law 93-288, as amended by Public Law 100-707
- Disaster Mitigation Act 2000
- 404 Hazard Mitigation Grant Program
- Code of Federal Regulations (CFR) - 44 Parts 201 and 206
- Hazard Mitigation and Relocation Assistance Act of 1993
- FEMA - 44 CFR Part 9 - Floodplain Management and Protection of Wetlands and 44 CFR Part 10 - Environmental Considerations

1. PLANNING PROCESS

The planning process generally followed for the development of this All Hazard/Pre-Disaster Mitigation Plan is consistent with the guidelines provided in the document entitled “State and Local Mitigation Planning, how-to guides” FEMA report 386-2. This document provides a step-by-step logical procedure for identifying hazards, profiling hazard events, creating an inventory of assets and estimating losses. In using this document we were able to better organize resources, assess risks, develop recommendations for pre-disaster mitigation measures, and also make recommendations for implementing the plan.

Also key to the development of an All Hazard/Pre-Disaster Mitigation Plan was the review of previous work which was completed by the County. In particular, the 1999 update to the County’s Comprehensive Emergency Plan was reviewed to determine what aspects of this plan might be applicable to the All Hazard/Pre-Disaster Mitigation Plan. This document was prepared by the Sullivan County Emergency Management Committee/Local Emergency Planning Committee (SCEMP/LEPC).

The County’s Comprehensive Emergency Management Plan contains the results of the hazard analysis which was performed by the Committee with the assistance of the State Emergency Management Office. This analysis utilized the States HAZNY program which is an automated interactive risk assessment tool that enables the quantitative assessment of risks. The HAZNY program facilitated the ranking of natural and man-made risks based upon the consideration of (1) the extent of areas impacted, (2) cascade effects, (3) frequency of occurrence, (4) amount of advance warning, (5) degree of impact, and (6) duration of events. The risk assessment provided by the County was then used as a benchmark for the use by Towns and Villages, as will later be shown, to assist them in

identifying and prioritizing risks on a local level specific to their communities.

Also important to the planning process was the solicitation of ideas from the public and from other agencies. To this end several public meetings were held which invited the public and agencies to participate. Section 1.2 and 1.3 of this Plan summarize the successful efforts which were completed with respect to public participation and coordination with agencies.

1.1 COMMITTEE MEMBERS

The Sullivan County All Hazard/Pre-Disaster Mitigation Plan was developed by the County of Sullivan and the Towns & Villages of the County, with input from the public. This section of the plan describes the members of the committee who provided input and guidance with respect to their jurisdictional areas.

Participants in this planning process include representatives from the County, and each Town & Village. The Town Supervisors and the Village Mayors that were a part of the plan development are: Allan C. Scott, Town of Bethel; Gregg Semenetz, Town of Callicoon; Salvatore Indelicato, Town of Cohecton; William Moran, Town of Delaware; Steven Levine, Town of Fallsburg; John J. Sipos, Town of Forestburgh; James Greier, Town of Fremont; Allan T. Schadt, Town of Highland; Richard A. Martinkovic, Town of Liberty; John LiGreci, Town of Lumberland; Fred R. Harding, Town of Mamakating; Georgianna Lepke, Town of Neversink; Patricia S. Pomeroy, Town of Rockland; Anthony P. Cellini, Town of Thompson; Richard Crandall, Town of Tusten; Ronald Scott, Village of Bloomingburg; Edward Justus, Village of Jeffersonville; Edward P. Pankonin, Village of Liberty; Gary Sommers, Village of Monticello; James Slater, Village of Woodridge; and Robert

Whitehead, Village of Wurtsboro.

Table 1, contains the list of the Pre-Disaster Mitigation Plan Committee Members including the Town Supervisors and the Village Mayors previously mentioned and additional other committee members. The additional members of the committee are primarily Highway Superintendents, and/or representatives of the Townships and Villages within Sullivan County. The representatives included, but are not limited to: Building Inspectors, Councilmen, Councilwomen, Trustees, Water/Wastewater providers, etc.

Table 1. Sullivan County Pre-Disaster Mitigation Plan Committee Members

Town/Village	PDM Committee Members		Addition Member Contact
	Supervisor (T) / Mayor (V)	Hwy. Superintendent	
BETHEL (T)	Allan Scott (845) 583-4350	Richard Yeomans (845) 583-4460	
BLOOMINGBURG (V)	Ronald Scott (Mayor) (845) 733-1400		
CALLICOON (T)	Gregg Semenetz (845) 482-5390	James Hess (845) 482-5505	Thomas Bose (Councilman) (845) 482-4380
COCHECTON (T)	Salvatore Indelicato (845) 252-7113	Brian DuBios (845) 932-8737	
DELAWARE (T)	William Moran (845) 887-5250	William Eschenberg (845) 887-4660	
FALLSBURG (T)	Steven Levine (845) 434-8812	Howard Conklin (845) 434-6827	William Illing (Town Engineer) (845) 434-8812
FORESTBURG (T)	John "Bill" Sipos (845) 794-0611	Daniel Hogue, Jr (845) 794-8069	
FREMONT (T)	James Greier (845) 887-6605	Martin Meyer (845) 887-4883	
HIGHLAND (T)	Allan Schadt (845) 557-8901	Norm Sutherland (845) 557-6257	Daryl Barnes (845) 557-8901
JEFFERSONVILLE (V)	Edward Justus (Mayor) (845) 482-4275		Louise Gorr (Village Clerk) (845) 482-4275
LIBERTY (T)	Richard Martinkovic (845) 292-5111	Timothy Pellam (845) 292-4172	
LIBERTY (V)			Shari Drollinger (845) 292-2250
LUMBERLAND (T)	John LiGreci (845) 856-4777	Charles Hallock Jr. (845) 856-2300	
MAMAKATING (T)	Fred Harding (845) 888-3000	Richard Johnson (845) 888-3033	John O'Rourke (Town Board) (845) 888-3000
MONTICELLO (V)	Gary Sommers (Mayor) (845) 794-6130		Richard Sush (Village Manager) (845) 794-6130
NEVERSINK (T)	Georgianna Lepke (845) 985-2262	Gary Van Valkenburg (845) 985-2281	George Haag (Code Enforcement) (845) 985-7685
ROCKLAND (T)	Patricia Pomeroy (845) 439-4399	Bowman Owen (845) 439-4213	
THOMPSON (T)	Anthony Cellini (845) 794-2500	Richard Benjamin Jr. (845) 794-5560	William Culligan (Superintendent) (845) 794-5280
TUSTEN (T)	Richard Crandall (845) 252-7146	Nathaniel Feagles III (845) 252-7373	Stephen Stuart(Code Enforcement) (845) 252-3310
WOODRIDGE (V)	James Slater (Mayor) (845) 434-7447		
WURTSBORO (V)	Robert Whitehead (Mayor) (845) 888-2522		
SULLIVAN COUNTY	Daniel L. Briggs County Manager (845) 794-0230	Peter Lilholt, Commissioner Sullivan County DPW (845) 794-3000	Robert Trotta (Mitigation Coordinator) (845) 794-3000 Richard Martinkovic, Chairman SCEMP/LEPC (845) 292-5111

The lead person of the All Hazard/Pre Disaster Planning Committee was the County's Hazard Mitigation Coordinator, who is also a member of the County Emergency Management Planning Committee (SCEMP) and Local Emergency Planning Committee (LEPC). Assistance was also provided by the SCEMP/LEPC which is headed by the County's current Civil Defense and National Disaster Preparedness Department, Civil Defense Coordinator who is also the current Supervisor for the Town of Liberty.

The SCEMP/LEPC is a County Committee made up of County, State, and Private sector committee members inclusive of representatives from the State Emergency Management Office. Several meetings were held with this committee, to obtain assistance and multi-jurisdictional input to the preparation of the plan. A list of the CEMP committee members that participated in providing input to this Plan is provided as follows:

Representative, 98 th District Assemblyman	District Liaison
WVOS Radio Station	General Manager
New York State Department of Health	District Director
New York State Police	Com. Vehicle Enforcement Unit
S. C. Division of Public Safety	Commissioner
S. C. Cornell Cooperative Extension	Executive Director
Sullivan County Bureau of Fire	Secretary
Catskill Regional Hospital	Director of Facilities Management
Sullivan County Sheriff Department	Sheriff/Deputy Sheriff
New York State SEMO-Region II	Regional Coordinator
Sullivan County EMS	Coordinator
Sullivan County 911 Center	911 Coordinator

New York State Department of Health	Hazmat Representative
New York State Encon Police	Representative
American Red Cross	Director
National Park Service	Chief Resource Management
S.C. Department of Public Health	Director
Town of Fallsburg	Public Works; Engineering Dept.
Sullivan County Division of Public Works	Engineering Dept.
BOCES, Health, Safety, & Risk Management	Representative
Town of Liberty	Supervisor

The above indicated group consists of a multi-agency consortium, that in addition to providing technical input to the plan also aided in providing coordination of the plan with numerous involved agencies.

1.2 PUBLIC PARTICIPATION

Public involvement was provided in two tiers. On the localist level tier, each Town and Village held board meetings which were open to the public to discuss the All Hazard/Pre-Disaster Mitigation Plan development. This included board meetings which allowed the public to: obtain information on the planning process; discuss hazards, risks, and critical facilities; discuss the ranking of hazards; and obtain comment on mitigation goals. Where needed the County Hazard Mitigation Coordinator provided assistance to these local meetings by providing information and where requested making presentations at these meetings.

The second tier of public involvement was provided through the holding of three (3) formal meetings held at the County's Government Center. The first such meeting was held at the start of the planning process to acquaint the public and committee members with the process to be followed, objectives and goals of the All Hazard/Pre-Disaster Mitigation Plan. This meeting also served to obtain initial public comment, input and to answer questions. The second meeting was held to obtain public comment and input with respect to: (1) the ranking of risks for each individual Town and Village; (2) obtain comment on geographic areas subject to the impacts of hazards and to obtain public information regarding the severity of such and (3) obtain public input with regard to identifying critical facilities. The third public meeting which is currently scheduled to be held in October, is being planned to obtain public comment and input on the Draft All Hazard/Pre-Disaster Mitigation Plan. The following is a summary with respect to these meetings.

On September 23, 2002, a kick-off meeting took place, in the Legislative Hearing Room of the Government Center in Monticello, NY, to discuss the Pre-Disaster Mitigation Plan. Both the Public and committee members were invited to attend this meeting. During this meeting, various handouts were provided to all participants to aid in their familiarization with the requirements of the Pre-Disaster Mitigation Plan. The handouts included:

- Hazard Mitigation Grant Program Handbook
- Guidelines for Community-wide Planning
- Contact Information of New York State Department of Environmental Conservation, Central Office Flood-plain Management Coordinators, and Regional Flood-plain Management Coordinators
- New York State Department of Transportation Compilation of Design Standards/publication
- Federal Register, Volume 67, Number 38/Tuesday, February 26, 2002/rules and Regulations – 44 CFR Parts 201 and 206
- Pre-Disaster Mitigation Background Guide
- List of References
- Listing of the Committee Members

During the meeting of September 23, 2002, a presentation was made by the representatives of the State Emergency Management Office (SEMO). SEMO representatives provided a detailed description of the planning process, as well as a description of the goals and objectives to be achieved. The County's Hazard Mitigation Coordinator, Robert Trotta, also provided a presentation describing the specific action plan

for which the members of the committee would proceed with, toward the preparation of an All Hazard/Pre-Disaster Mitigation Plan.

This meeting also provided the opportunity for participation by other agencies. At this meeting presentations were made by the New York District of the United States Army Corps. Of Engineers and also the New York State Department Of Conservation. These presentations by agencies addressed wetlands and flood mitigation issues respectively.

On March 18, 2003, a second public meeting was held to obtain public comment and ideas with respect to the identified and prioritized risks for each Town and Village. In addition, members of the Public aided in identifying additional areas and critical facilities which may be subject to impacts due to various natural weather related severe events or man-made events. The County's Hazard Mitigation Coordinator made two like presentations which summarized the process and progress made to date with respect to plan development. The second presentation was made on the same evening as a number of the public arrived late for the meeting where it was deemed that a second presentation was needed. Handouts were given to the public along with a questionnaire to obtain input about critical facilities, history of impacts and to assist in collecting data concerning the geographic location of the impacts of hazards. The information provided by the public on the questionnaires was collected and read aloud at the meeting.

During this meeting, as a cooperative inter-agency effort, the American Red Cross set up a booth to distribute information concerning services which are available to the public for disaster mitigation and pre-disaster preparedness. The American Red Cross also made themselves available to answer questions and contributed information to the meeting.

This meeting was very successful in obtaining information from the public regarding:

the acceptability of the individual ranking of hazards by each Town and Village, adding to the information data base with respect to critical facilities and for providing information from the public with regard to the extent and nature of areas impacted by certain hazards. In general on the basis of the comments received from the public at this meeting, it is understood that the individual ranking of hazards by the Towns and Villages is in agreement with public concerns. In addition, it was confirmed that the risks are similar between all parts of the County with minor variability. It was also determined that the ranking of hazards are very similar to that which was developed previously on a County-wide basis by the County's SCEMP/LEPC committee. The public expressed acceptance of the rankings of the hazards at this meeting.

A third Public Meeting has been tentatively scheduled for October 28, 2003 at 7:00 PM. This meeting has been set to obtain public comment on the Draft All Hazard/Pre-Disaster Mitigation Plan. The results of this meeting with respect to the acceptability of this plan by the Public, will be discussed in the final edition of the plan.

1.3 COORDINATION WITH AGENCIES

County, regional, state, and federal agencies were consulted for relevant information and recommendations with regard to the Sullivan County All Hazard/Pre-Disaster Mitigation planning effort. Personnel from these agencies attended planning meetings, provided resources and information, reviewed minutes, and reviewed drafts of documents. The contributions from agencies and organizations that supported the planning process are briefly summarized below:

FEMA: Involved in the review of the Draft All Hazard/Pre-Disaster Mitigation Plan and an information source through the access of the FEMA website.

USGS: Accessed available information from USGS such as mapping and data through the online website.

NOAA: Accessed information available from NOAA with respect to weather through the online website.

NYSEMO: Representatives attended planning meetings, provided guidance as needed and are involved in the review of the Draft All Hazard/Pre-Disaster Mitigation Plan.

American Red Cross:

Attended planning meetings, provided brochures, and also, spoke to the public about the American Red Cross and organization's role.

Local Emergency Planning Committee:

Attended planning meetings, reviewed minutes, provided recommendations, and answered numerous hazard questions.

Sullivan County Planning Department:

Provided statistical County data.

Sullivan County Division of Public Works:

Provided research, conducted planning meeting presentations, organized the plan, coordinated with local Towns and Villages, coordinated with appropriate State and Federal agencies, administration of the plan, and attended hazard/disaster meetings.

United States Army Corps. Of Engineers:

Assisted in making a presentation at a public meeting and provided information and handouts.

New York State Department of Conservation:

Assisted in making a presentation at a public meeting and provided information and handouts.

City Of Yonkers:

Attended and participated in public meetings.

Sullivan County Soil and Water Conservation:

Provided information and answered questions.

2. RISK ASSESSMENT

The **risk assessment** process is made up of:

- identifying hazards
- profiling hazard events
- assessing vulnerability through:
 - identifying assets
 - estimating potential losses
 - analyzing development trends

The following subsections of the plan describes the effort made to: (1) identify the hazards to the community, (2) provide profiling of the hazard events and (3) to assess vulnerability.

2.1 IDENTIFYING HAZARDS

In order to ascertain which hazards are prevalent in Sullivan County, several resources for information were accessed. One source involved a literature search of the information available from the local newspapers; namely the Sullivan County Democrat, the River Reporter and the Times Herald Record. Other sources included: (1) a review of any available reports or plans, (2) consultation with community experts, (3) accessing available websites and (4) information provided by the public during the public meetings which were held. On the basis of this review, the predominating hazards that afflict the County are due to various types of storms or the combination of such that cause power outages, flooding, structural damage and cascade effects. Additionally, structural damage due to fire also appeared to be a predominating hazard. Other hazards appear to occur on a less frequent basis or have had a lesser impact historically speaking, based upon the information

collected. The following summarizes types of hazards and their applicability to Sullivan County on the basis of the investigations made.

As previously mentioned, the development of the plan followed the step-by-step process outlined in FEMA's publication 386-2 entitled "Understanding Your Risks, identifying hazards and estimating losses." In this publication a listing of hazards is identified as part of a worksheet for checking of applicability. These hazards are described in this section along with a statement as to applicability to the development of the Plan.

Avalanche - Is the slide of a significant amount of snow off mountainous terrain. Although Sullivan County is subject to significant snow storms, no avalanches were found to be an issue at this time.

Coastal Erosion - Is the loss of land mass due to oceanic tidal action upon shorelines. As Sullivan County is a mainland in the New York State area, with no portions adjacent to any tidal waters, coastal erosion is not an issue.

Dam Failure - Is flood damage specifically caused by the structural failure of a man-made water impoundment. Sullivan County has several significant water impoundments controlled by dams and numerous smaller dams. Based upon historic information and information from experts, dam failure is a hazard applicable to the County.

Drought - Is the loss of water supply due to the lack of rainfall. The majority of water supply in Sullivan County is via the groundwater source. Groundwater is less subject to change than are surface water supplies. None the less drought impacts have been felt in Sullivan County based upon information from certain Towns & Villages. These impacts effect shallow wells and certain public water supplies.

Earthquake - a shaking or trembling of the earth that is volcanic or tectonic in origin. The following figure provides useful information with regard to the nature of seismic impacts.

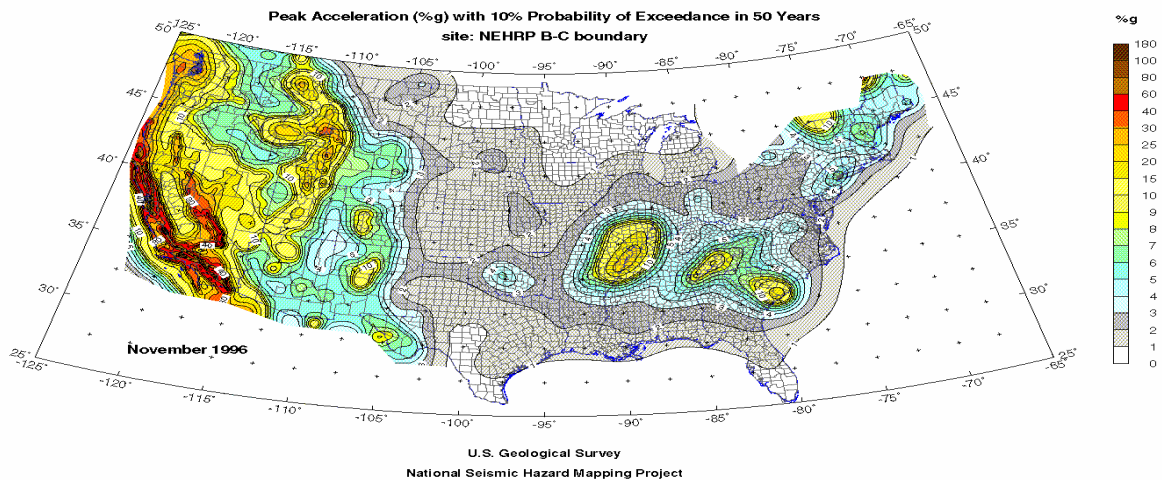

Figure 1. Peak Acceleration with 10% Probability of Exceedance in 50 Years

The values shown on the Figure1 are "peak ground acceleration (PGA) in percent of g with 10% probability of exceedance in 50 years". Therefore, the map represents ground motions that can be reasonably expected in a 50 year period. Sullivan County, as shown in the above figure, is located in the four (4) to five (5) %g region.

One can not predict exactly whether an earthquake of a given size will or will not occur in the next 50 years. The map takes the random nature of earthquakes into account. It was constructed so that there is a 10% chance that the ground acceleration values shown on the map will be exceeded in a 50 year time period.

On the basis of this information and the lack of any historic information or expert testimony to the contrary, earthquakes were not considered a predominating hazard in Sullivan County at this time. Although special pre-disaster consideration regarding seismic needs does not appear to be needed, it is recommended here that designers of building strictly follow the Building Code of the State of New York with respect to where seismic design should be incorporated into a facility.

Epidemic - is the spreading of a contagious disease on a mass basis. No wide spread diseases have been found to impact the County based upon the lack of historic records of such.

Explosion - the rapid burning of material and gases yielding the violent release of energy. There is no known history of explosions in the County. Some concern was expressed by the Town of Delaware with regard to rail freight which may contain explosive materials that are shipped through the County. Although potential is there, consideration is not felt to be overly warranted in this area. In section 2.2, additional information to discuss under the topic of explosion can be found.

Extreme Heat - Condition caused by persistent long periods of hot spells, which can cause physical impacts upon human populations, wildlife, plant life and structures. Cascade effects can include enhanced fire possibility and drought. Generally, the climate of Sullivan County does not experience periods of extreme heat, hence this is a non-issue at this time.

Flood - Flooding is the submergence of lands in the vicinity of rising waterway levels generally adjacent to water bodies and drainage areas. Such may be caused due to excessive rainfall, rapid thaw of snow packs, failure of liquid impoundments, etc.

Historically, Sullivan County has been subjected to numerous flood events, induced both by the excessive rainfall and at times, rapid melt of snow packs. Cascade effects occur due to the failure of man-made water impoundments and impoundments made by wildlife (beaver).

Hailstorm - Is due to the creation of frozen (ice) precipitation which may form in the atmosphere. Although hailstorms have occurred in Sullivan County causing some power outages at times and some structural damage, such occurrence and impact is not considered to be significant based upon historic and recent storms which have occurred.

HAZMAT - Fixed Sites - Is the discharge of hazardous materials (toxic, flammable or corrosive) into the environment from a facility located at a fixed site.

Generally HAZMAT issues from fixed sites in the County are limited in nature but an issue not to be ignored. In the Town of Liberty contamination of public water supplies with MTBE, a gasoline additive, due to a possible discharge from suspected gasoline stations was an issue over the last ten years. Due to numerous underground storage tanks used for fuel oil (homes & businesses), discharges to the environment from tanks as they get old will occur.

HAZMAT - In Transit - Is the discharge of hazardous materials (toxic, flammable or corrosive) during their transport via a variety of transportation means (motor vehicle, train, boat or plane).

In the past a train derailment was the cause for concern just outside the County, near the Delaware Valley. This has caused for heightened concern within the County although no derailments within the County have been reported to discharge any hazardous materials. Motor vehicle discharges have also occurred due to spillage of oil and fuel due to accidents.

Hurricane - A hurricane is a tropical cyclone with winds exceeding 74 miles per hour accompanied by rain, thunder and lightning.

Generally hurricanes have been considered for the purpose of this plan as a severe rain storm coupled with high winds. In this category the County has routinely been subjected to severe storms on a frequent basis. Such also includes other more coastal related storms such as northeasters due to the location of the County relative to Southern New York. Hence for the purpose of this plan, such storms have been included in other considerations found in this plan relative to severe storms. Naturally a hurricane impact on the County would be on the upper end of the severe storm consideration.

Lastly, please refer to the information provided in the windstorm subsection which indicates that Sullivan County is in a known Hurricane Susceptible Area.

Ice Jam - is the clogging of water bodies with blocks of ice. The ice is normally formed by the freezing of the water body and becomes dislodged due to hydraulic conditions whereby the ice floats and may jam at sections of the water body that have limited cross section (i.e. at bridges and natural channel contractions).

These have been reported by the public at meetings to be present in the County.

Ice Storm - freezing rains which cause for icing of roads, structures and vegetation can cause structural damages and create hazardous slippery conditions.

Ice storms have frequently occurred in the County based upon conversations with Public Works Officials. These routinely cause trees to topple due to the weight of the ice which produces structural damage of property and cause power outages.

Land Slide - Downward movement of a sloped land mass under the force of gravity.

Although not discussed herein, “liquefaction”, which is the movement of soil as a viscous fluid which thereby produces a landslide is felt to be the cause for the occurrence of landslides in the County. Based upon historic information, landslides have occurred in the County on a localized basis and in particular in Craigie Clair, located in the Town of Rockland. Based on information from the County’s Soil, Water Conservation District, landslides have a potential to occur in parts of the North Branch which is located in the Town of Callicoon.

Figure 2. Landslide Incidence Level

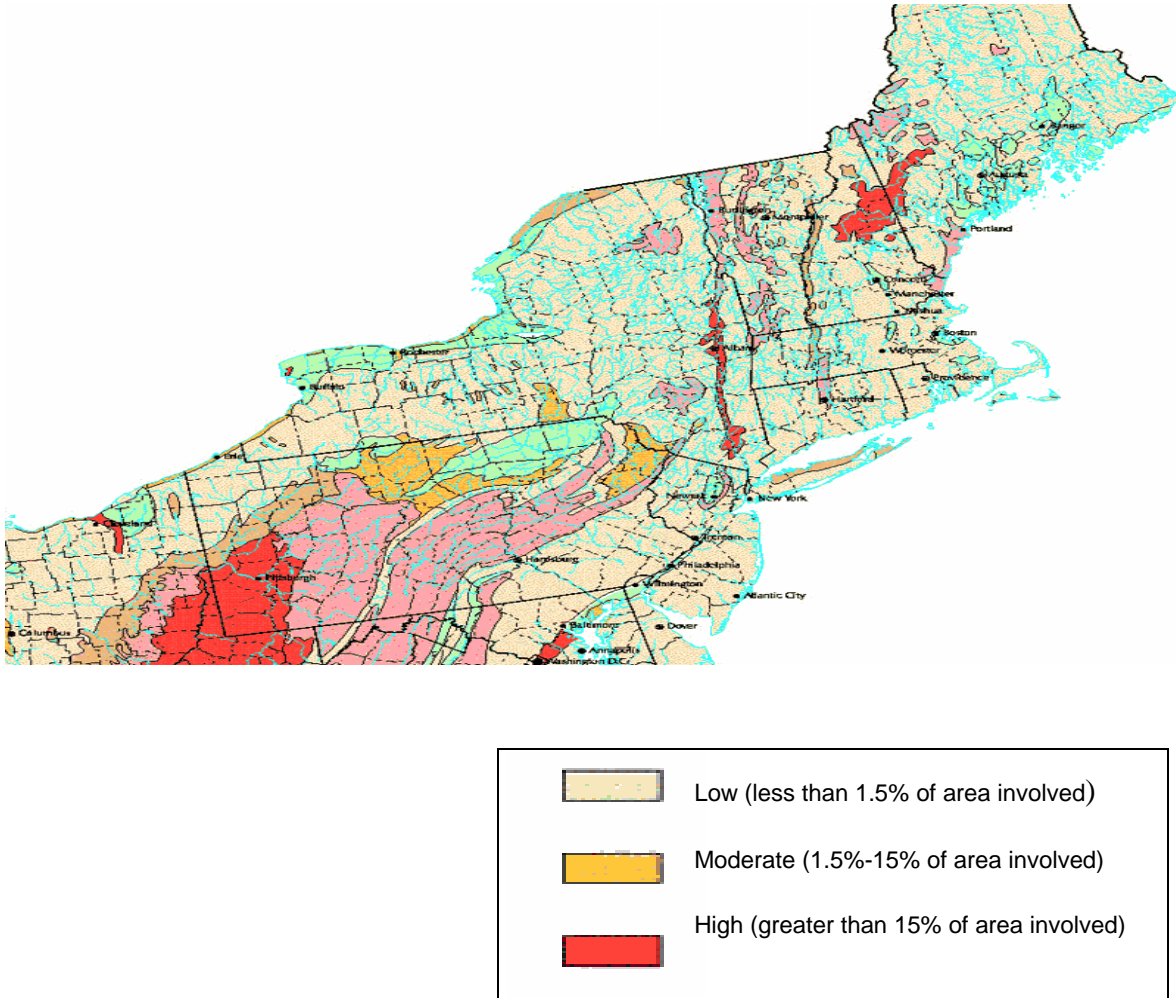

Figure 2 is a detailed map with regard to landslides taken from the USGS website. As one can see Sullivan County is in a region that is divided into two levels of landslide incidence, low and moderate. The northern and eastern parts of the County are within the low incident level area, where less than 1.5% of the area is involved in landslides and the southern and western part of the County is within the moderate level area, where 1.5% to 15% of the area is involved in landslides. The more susceptible regions are primarily the Town of Cochection, Town of Tusten, Town of Highland, and the Town of Lumberland.

Mass Gathering - are caused by the congregation of large masses of people which can lead to civil problems, sanitary and health issues.

Sullivan County has been the site of the historic Woodstock music festival of 1969 which has had commemorative similar re-occurrences. Hence this is a bonafide concern to be considered by the plan.

Mine Collapse - is the structural failure of an underground mine used to harvest minerals from the earth

There are no known active mines in Sullivan County although there are abandoned copper mines and railroad tunnels which may have some potential for issues. As no historical problems are known to have occurred based upon our review of articles and information, mine collapse is not considered to be a major issue in the County.

Oil Spill - Is the discharge of oil into the environment by a fixed site or mobile site (vehicles).

This is similar to what has been mentioned with respect to Hazmat hazards. Historically it is known that fuel oil spills have resulted due to the lack of maintenance of oil storage facilities or due to damage as a consequence of a cascade effect resulting in the structural damage of an oil containing vessel.

Power Failure - a source or means of supplying energy that has fractured or given way under stress.

The power to the County is supplied by the following distribution companies: (1) Central Hudson Gas and Electric, (2) New York State Electric and Gas (NYSEG) and (3) Orange and Rockland Utilities, Inc. Power Failures are being handled more efficiently today due to the research and development of the Outage Management Systems (OMS). New GIS software is allowing utility companies to pinpoint exact locations of outages, rather than only knowing a general location, which in turn shortens the overall response time of the utility crews. Also, the development of more reliable circuit protection equipment for each circuit aids in the overall reliability of the circuit being protected.

Although new equipment and information is now available, power outages will still occur. They generally do not last more than a half a day typically, however there are those occasional day or two power outages that do occur.

Radiological - In Transit - A release of radioactive material into the environment while in transit due possibly to an accident or malfunction in the container which holds the material.

No historical data was found to be available to indicate that any radioactive material has been released into the County.

Certain Towns in the County expressed a concern with respect to radioactive discharges from both rail and vehicles, due to the transport of such materials through the County. As no history of losses are known, but public concern was locally moderate in

areas, this hazard has been included for further consideration.

Structural Collapse - is the failure and caving in of a structure.

In and of itself, potential for structural collapse of a structure in the County was not historically found to be an issue unless such was caused by another hazard. Generally building code enforcement prevents fragrant issues from arising. In addition, programs for the demolition of abandoned structures have helped to get rid of potential problems.

Structural Fire - is the uncontrolled burning of residential, commercial, industrial, institutional or other property.

On the basis of the review of numerous newspaper articles, structural fires have been frequent in the County.

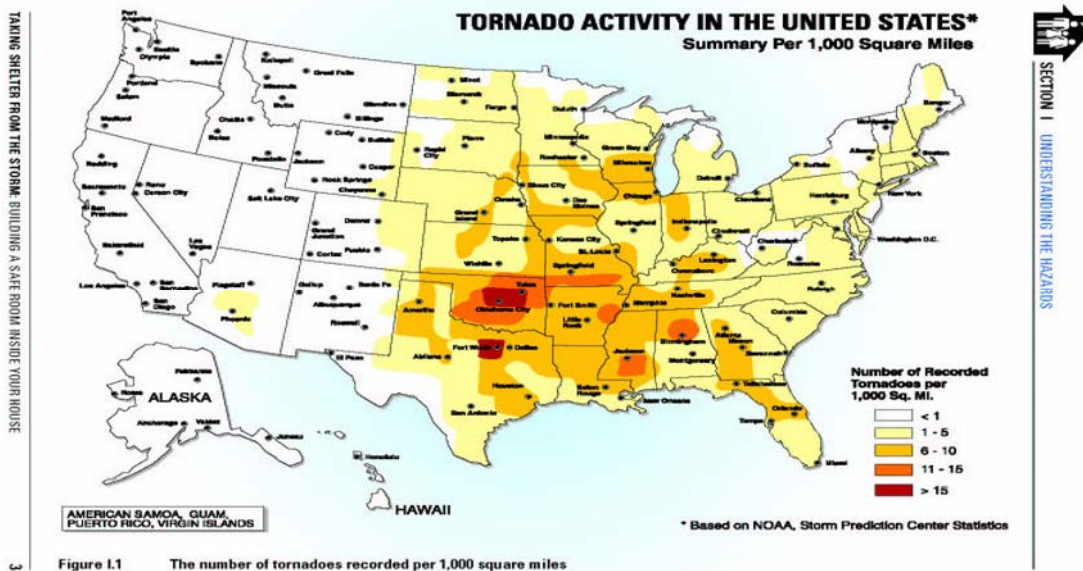

Terrorism - Is the systematic use of violence (as bombing) committed by groups in order to intimidate a population or government into granting their demands.

As a result of the programs implemented by FEMA stemming from the September 11th disaster, a study was conducted in Sullivan County to identify the potential for terrorism in the County. This study found that there are no significant targets in the County in comparison to other areas across the Country. Other areas outside of the County contain national landmarks, facilities and governmental establishments which would be more prone to terrorism due to the close proximity of dense population areas.

Tornado - Is a violent destructive whirling wind accompanied by a funnel-shaped cloud that progresses in a narrow path over the land.

Figure 3, titled "Tornado Activity In The United States", reveals that Sullivan County falls under the light yellow shaded area. The yellow shaded area, as per the key, is an area where one (1) to five (5) tornadoes per 1,000 sq. miles have been recorded. This is not a large number, however, it does show that tornadoes do occur in Sullivan County. This figure was found on the FEMA website.

Figure 3. Tornado Activity in the United States

Transportation Accident - an unexpected happening causing loss or injury which is not due to any fault or misconduct on the part of the person injured but for which legal relief may be sought while using a means of conveyance or travel from one place to another.

Historically, as is typical for much of the County, traffic accidents are typical for Sullivan County. Some of these are due to the cascade effect caused by other hazards such as severe winter weather, ice storms or other severe storms.

Train derailments have occurred and are felt to be a potential problem as mentioned previously due to the transport of hazardous materials. No known train derailments involving the release of hazardous materials were uncovered in the articles and queries made with officials of the County.

Water Supply Failure - the loss of water supply for a community due to either structural failure or contamination of the source.

As mentioned previously with respect to Hazmat issues, water supply has been disrupted in certain areas in the County for a temporary period of time due to contamination. At other times other types of hazards such as floods have damaged water conveyance facilities which has also caused for the temporary disruption of water supply.

Wildfire - Is a sweeping and destructive conflagration especially in a wilderness or a rural area.

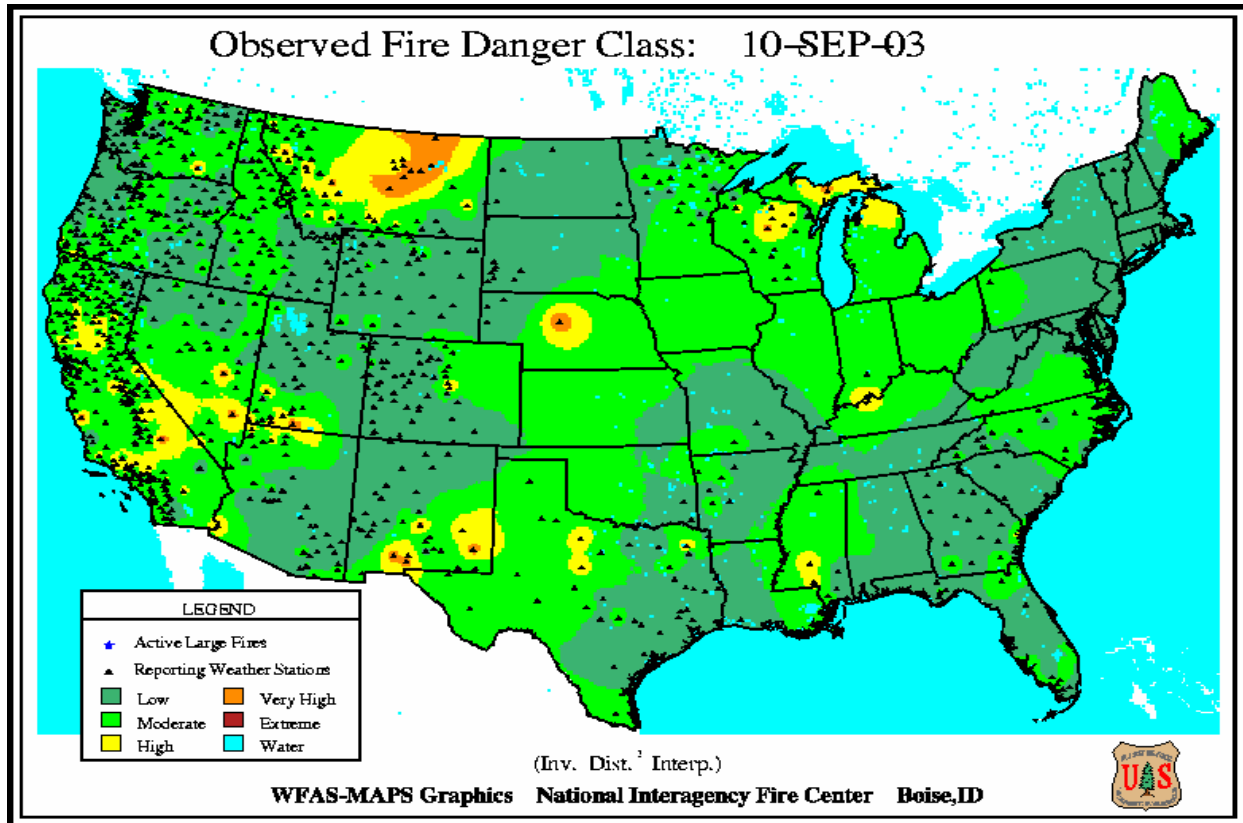

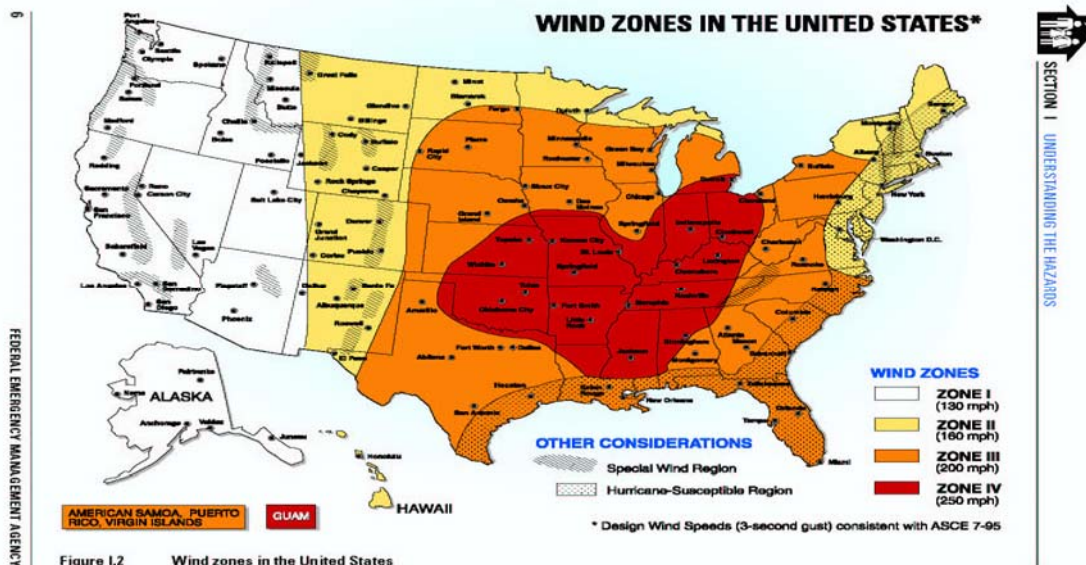

Figure 4. Observed Fire Danger Class

As shown in Figure 4, Sullivan County is in a Low Observed Fire Danger Class, as of September 10, 2003. This Class is ever changing as other variables related to wildfires change, i.e. if a summer produced very little precipitation, grasses and miscellaneous plant life would be drier and more susceptible to fire. For current fire class data, the above map can be obtained from the USDA Forest Service webpage.

Windstorm - a storm marked by high wind with little or no precipitation.

Figure 5, titled "Wind Zones In The United States", reveals that Sullivan County is located in Wind Zone II (160 mph) and also within a designated Hurricane-Susceptible Region. This figure can be found on the FEMA website.

Figure 5. Wind Zones in the United States

Winter Storm - are storms which occur in the winter which can consist of various forms of precipitation such as snow, sleet, freezing rain and rain. Such storms which have particularly resulted in flooding have caused for the more harsher of conditions in Sullivan County. Major snow storms have been issues as well and demanding upon the Public Works Department of the County, Towns and Villages historically. Both such storms have historically caused cascade effects leading to structural damage and collapse, as well as power outages.

Most Prevalent Hazards

Based upon the information collected during the Identification of Hazards phase of this project, the following is a tabulation of the most prevalent hazards with respect to the Communities in Sullivan County:

Dam Failure	Hurricanes
Drought	Ice Jams
Earthquake	Landslides
Epidemic	Mass Gatherings
Explosion	Power Failure
Floods	Structural Fire
Hail Storm	Tornadoes
Hazmat - Fixed/In-Transit *	Transportation Accidents
(*Inclusive of Oil Spills and Radiological) Winter Storms	

Each of the above mentioned hazards will be explored (profiled) in Section 2.2, in greater detail to better define the frequency and level of impacts. On the basis of the type and magnitude of the impacts along with the level and nature of re-occurrence, the hazards will be ranked in priority (See Section 2.5) on a jurisdictional basis.

2.2 PROFILING AND ASSESSMENT OF HAZARD EVENTS

In Section 2.1 of this plan a listing of hazards along with a brief discussion of their applicability in Sullivan County was provided, inclusive of a tabulation of the hazards that would be profiled based upon their prevalence in the multi-jurisdictional areas. Section 2.2 provides a summary of hazard profiling that was completed along with an assessment of the impact of each hazard upon the community. The result of the Section 2.2 work was to help to identify the severity of the hazards in order to: (1) guide subsequent ranking of such hazards in order of the most severe and/or frequently occurring type, (2) help determine the highest priority of need with respect to implementation of pre-disaster action and (3) guide the focus for recommendations to be made by the Plan.

Each Town and Village was asked to provide information concerning the occurrence of hazards in their community and to help identify what areas these hazards affect. Where applicable Towns and Villages provided maps to help identify impacted areas. This information was combined with information provided by FEMA via the FEMA website and from SEMO with respect to relative cost of damages which are known for various declared disasters.

Section 2.2 has eliminated further discussion of avalanche, coastal erosion, extreme heat, mine collapse, structural collapse, terrorism, water supply failure and wildfire as these items appeared to have a low sense of priority in the County. These items could be incorporated at the time the Plan is updated in the future, should conditions change.

The following summarizes the information that was gathered with respect to profiling of the hazards which were identified to be of concern in Section 2.1 of this Plan.

Dam Failure - Major man-made water impoundments in Sullivan County include New York

City's Neversink Dam, Swinging Bridge Reservoir, Rio Reservoir, Toronto Reservoir, Mongaup Falls Reservoir, Lake Superior and Silver Lake. Certain other lakes have controlled discharge such as Morningside Lake which can represent some similar hazards.

Silver Lake Dam in the Village of Woodridge is an example of a recent failed structure. The foundation of this dam was undermined which began the failure of the structure. As a result of swift Village and County action, a controlled breaching of the dam was achieved which eliminated the hazard.

Based upon conversations with the Sullivan County Soil and Water Conservation District, a check of the available FEMA records and other information; large dam failure has not been an occurrence that resulted in major losses in the County. Minor smaller agricultural impoundments and other man-made privately owned impoundments have been generally known to have failed. One minor private dam upstream of Seminary Creek was reported to have failed which increased flooding of the Hamlet of Callicoon in 1996 and another private dam near Cooley was reported by the Soil Conservation District to have been a minor contribution to the flooding of Livingston Manor in the Town of Rockland that occurred in 2000. The Town of Highland also reported that there are seven (7) dams in their geographic area that are believed to be vulnerable. **However, based upon the following information from DEC and a check of historic records, none of the Town of Highland Dams have had an incident reported. Therefore, this does not substantiate any need for further profiling.** In addition, no costs for damages were found to have resulted due to failure of any dams..

As per conversations with the DEC (Dam Safety Section) and a search performed on the National Performance of Dams Program (NPDP) website

(<http://npdp.stanford.edu/NPDP/servlet/DIN.Incident>), three (3) dam failures and two

(2) dam incidents have been reported as follows:

<u>DEC ID #</u>	<u>Dam Name</u>	<u>Failure Date</u>	<u>Reason</u>
163-2772	Bear Pond	May 8, 1991	pipng failure.
147-4234	Lincoln Pond	August 7, 1975	overtopping failure.
147-4972	Campbell Pond	May 1989	overtopped.

<u>NPDP ID #</u>	<u>Dam Name</u>	<u>Incident Date</u>	<u>Reason</u>
NY00497	Rio	1994	earth embankment did not meet requirements of FERC.
NY00696	Swinging Bridge	April, 1995	buckled steel penstock running through the bridge.

None of the above referenced failures have resulted in any known damages to public or private properties. None of these events are considered to be significant. Hence, based upon the data we have collected and received, a significant dam failure has not been known to occur. In addition, as is revealed from the data above, the frequency of occurrence is very low.

Drought - Periods of drought have had limited and localized impacts in the County.

At times, inadequate water supply has been an issue for the Village of Liberty and the Village of Woodridge. With respect to Woodridge, seasonal demands are problematic due to a high seasonal population. In the Village of Liberty, a surface water supply is used, which is susceptible to drought impacts.

No major losses resulting from droughts are known to be documented and no disaster declarations are known to be applicable to drought in Sullivan County.

Earthquake - As previously mentioned in Section 2.1, no major impacts have been historically caused by earthquakes in the County. Hence earthquakes are not felt to be an issue at this time.

Epidemic - No epidemics have been known to plague the County, however the County has been active recently with respect to ascertaining the threat of the West Nile Virus. Consideration with respect to the need to provide pre-disaster planning appears to be low for epidemics. The County has been active in preparing an annex section to its Comprehensive Management Plan that addresses biological hazards caused by bioterrorism. This effort dovetails with epidemics and would appear to be adequate at this time, in addressing pre-disaster needs of this item.

Explosion - No major explosive events are known to have presented themselves in Sullivan County, with the exception of an event which occurred in neighboring Pennsylvania. This event involved a railroad derailment of hazardous materials, where it is

reported that explosions occurred in Shohola, Pennsylvania which were felt in the Town of Highland. Information regarding any Sullivan County losses due to this explosive event was not found to be available.

Floods - As previously mentioned in Section 2.1 of the Plan, floods have historically plagued the County on a frequently re-occurring basis. The following is a short list of Federally declared disaster events involving flooding.

- FEMA 1095-DR-NY - January 1996. Major flood disaster occurred due to a severe winter rain storm that also caused for a rapid thaw of snow packs. Losses which were funded by FEMA totaled \$6,438,406.00 inclusive of County, Town and Village damages.
- FEMA 1335-DR-NY - May 3, 2000 to September 14, 2000. Major rain storms caused for severe flooding. More than \$1.4 million in damages were recorded.

In addition a major winter rain storm occurred during December 16 to December 17, 2000 which did not receive any Federal or State aide. This event caused for \$2,716,297.00 in flood damages to municipal facilities and \$2,615,330.00 in damages to private individuals, totaling \$5,331,627.00 in flood damages.

Some specific areas which have been identified by the Towns and Villages as particularly susceptible to flooding include:

Town of Delaware	Flooding due to the Delaware River and the Callicoon Creek.
Town of Fremont	Washout areas due to Flooding are found on Ruebman Road, Weiss Road, Karow Road, the intersection of Specht Road and Glen Ellyn Road, the intersection of McColly Road and Deer Lake Road, Basket Road and Winkler Road.
Town of Highland	Approximately twenty areas of flooding within the Town.
Village of Jeffersonville	The low areas surrounding the Callicoon Creek and Laundry Brook are areas where flooding occurs.
Town of Tusten	Flooding due to the Delaware River and the Ten Mile River and its stems.

The **Delaware River** and the **Callicoon Creek** have been areas of concern due to flooding. They have a few low areas that surround them in the Village of Jeffersonville, the Town of Delaware and the Town of Tusten. The Town of Highland also reports Delaware River as a flood hazard.

Lastly but not least, in addition to the major flood damages reported in this section the table on the following page lists other flood damages that were reported as part of the National Flood Insurance Program.

Flood Data For Sullivan County in the past 15 years:

(*Data below used courtesy of www.fema.gov/nfip/10400212.htm)

<u>Town / Village</u>	<u>Total Flood Loss 1/1/78 - 12/31/02</u>	<u>Avg. Annual Loss</u>
Bethel	\$2,607.94	\$173.86
Bloomington	\$0,000.00	\$0,000.00
Callicoon	\$28,469.22	\$1,897.95
Cochecton	\$1,209.12	\$80.61
Delaware	\$39,380.89	\$2,625.39
Fallsburg	\$250.00	\$16.67
Forestburg	\$8,370.22	\$558.01
Fremont	\$7,630.71	\$508.71
Highland	\$22,314.07	\$1,487.60
Jeffersonville	\$53,061.15	\$3,537.41
(T) Liberty	\$11,881.12	\$792.07
(V) Liberty	\$55,527.21	\$3,701.81
Lumberland	\$1,649.98	\$110.00
Mamakating	\$62,156.16	\$4,143.74
Monticello	\$0,000.00	\$0,000.00
Neversink	\$20,273.65	\$1,351.58
Rockland	\$987,027.32	\$65,801.82
Thompson	\$105,939.31	\$7,062.62
Tusten	\$19,815.99	\$1,321.07
Woodridge	\$118.00	\$7.87
Wurtsboro	\$11,340.45	\$756.03
TOTAL	\$1,439,022.51	\$95,934.83

From the above data, Sullivan County has estimated losses due to floods of almost \$96,000.00 annually. And of that \$96,000.00, almost two-thirds of the annual loss is reported from the Town of Rockland. As per the National Weather Service (NWS), in Binghamton, NY, there were eighteen (18) flood events from 1993 to 2002, therefore the frequency of occurrence during this time period is almost two (2) flood events a year. The events were localized events, in flood prone areas, lasting anywhere from hours to days.

Hail Storm - For the purposes of this Plan, hail storm events have been combined with the hazard entitled Ice Storms. Please refer to Ice Storms for further discussion. This has been done as generally hail storms on their own have not been found to be major problems in the County. However, such storms accompanied by icing as is the case with ice storms is a more frequent and damaging hazard in our local area. The NWS classifies hail storms into two groups hail (all greater than .75 inches but less than 1.5 inches in diameter) and killer hail (greater than 1.5 inches in diameter). The combined number of events from 1983 to 2002 is twenty-three (23) or slightly more than one (1) event a year. The events are generally highly localized and have a duration of 10 to 30 minutes.

Hazmat - Fixed Site, Hazmat - In Transit, Oil Spills, and Radiological - The above titled hazards have been combined for consideration. On the basis of concerns provided by the Towns and Villages, and in particular from the Towns of Delaware, Tusten, Cochecton, Fallsburg, Forestburg, Highland, Lumberland, Rockland, Neversink, and Thompson, along with the Village of Wurtsboro, Hazmat is an issue which is high with respect to public interest. The following is a listing of certain concerns that were made:

Town of Delaware	HAZMAT - In Transit and Radiological - In Transit on local railroads, Route 17B, Route 52/52A and Route 97. Transportation Accidents or explosions on Route 17B, Route 52/52A and Route 97.
Town of Highland	HAZMAT - Fixed is a hazard found at five locations.
Town of Tusten	Transportation Accidents due to the Conrail (Erie - Lackawanna Div.). HAZMAT - In Transit on Route 97.
General Concern	The following roads within Sullivan County have been locations of potential hazards: Route 17, Route 17B, Route 52/52A and Route 97. Hazardous and radiological materials are purported to travel over these roads and in the event of a collision or accident, a major hazard has potential to develop. Railroads in the Town of Delaware and the Town of Tusten have the same hazards of concern, as the railroads transport hazardous materials through Sullivan County.

Some of the concern in the Southwestern portion of the County is due to a past train derailment near Shohola, Pennsylvania, where hazardous materials were reported to be

released into the environment. An explosion was also reported to have occurred at that time that could be felt in the Town of Highland. This serious occurrence has raised public concern as a freight railroad continues to run through the Towns of Tusten, Cochection, Delaware and Fremont.

Due to issues with rail freight, similar concern is with respect to trucking of materials through the County. Road accidents which cause for fuel and oil spills by tanker trucks have confirmed these fears to those concerned.

Hazmat has had other issues from fixed sites such as gas stations, private and commercial buildings where fuel spills via worn out storage tanks and spills have repetitively been issues on a limited scale. **A list of sites & spills from the past year has been included in Appendix C.** MTBE was a highly publicized issue in the Village of Liberty due to the contamination that was suspected from a gas station.

Costs associated with spills and discharges of hazardous materials could not be readily identified. **On average, from the spill data obtained from the DEC website for the past year, spills occur approximately every 3 to 4 days. The spills are typically minor and are taken care of immediately to prevent costly damages.**

As per conversation with the SCEMP/LEPC, Sullivan County does not have any Town or Village that has prevalent problems with regard to Hazmat events. State Route 17 and other primary State Routes do have the volume of traffic that would generate truck traffic for chemical, oil and gasoline tank incidents. We also have had a few No. 2 oil tank trucks that have had minor spills as a result of a motor vehicle accident, but not at any particular reoccurring location.

Also, there has not been any significant events in Sullivan County as of recent. The last memorable event occurred in 1988 with a chemical spill from a railroad car near Callicoon. None have occurred since. "Small" events are spread out throughout the County that may include oil spills from transport trucks, as well as other motor

vehicles leaking fluids.

Costs associated with the large, moderate or small events are related to recovery of products that may be spilled (oil, gas, etc.) plus clean up by licensed environmental companies. A numerical value could not be determined.

Hurricanes - Many rain storms in the County have been associated with an increase in winds. As Sullivan County is basically inland, hurricane impacts still occur but appear to be in-line with what occurs for other major precipitation events. Hence for the purpose of this plan, they are deemed to be included with the concerns for flooding and structural collapse that may occur due to storms of various types.

Ice Jams - Although these have been mentioned as a concern of citizens and certain officials in the County, based upon the experience of the Sullivan County Division of Public Works with 400 bridges and large culverts, jamming under bridges has not been the cause of major structural damages to these structures. Hence, although this issue is visible and a concern to the public it has not caused damages to bridge structures.

With regard to erosion issues and damages to vegetation and land, ice jams could be an issue, but no data could be found at this time regarding the cost of any damages incurred.

Landslides - The most visible landslides in the County, in the Craigie Claire area, still have incidence of lesser scale since repairs and improvements have been made to mitigate such. In the past these landslides closed off a portion of the Town of Rockland's highway system, where the portion closed off had an estimated value of about \$800,000. **As per the Sullivan County Soil & Water Conservation District (SWCD), there are six (6) known areas where landslides have occurred, namely:**

- **Russel Peters Farm (Rte 121 - North Branch), steep slope adjacent to North Branch Callicoon Creek.**
- **Ernie Reimer Farm (Rte 95 Obernburg Road - North Branch), steep slope adjacent to Callicoon Creek.**
- **County Route 128, between Jeffersonville and North Branch, corrected by Sullivan County.**
- **Along Craigie Claire Road, near Clear Lake adjacent to Beaver Kill, which caused for the closure of the road for several years.**
- **Steep slope along Rte 151, South of Lew Beach, required extensive grading & reforestation by SWCD.**
- **Shin Creek Road, East of Irving Berlin home, slide into Shin Creek.**

Generally, landslides in these areas have not been frequent in nature with exception to Craigie Claire. Over the past ten (10) years the Craigie Clare Road area has had about three (3) to four (4) events. However, hazard mitigation work has been completed to stabilize and reduce the impact of the problem. As a result of such work more minor and less frequent slides have occurred. It is too early to update the frequency in this particular area.

Mass Gatherings - As previously mentioned, mass gatherings have been particularly expressed as a concern to the Town of Bethel. This is due to the proximity of the original Woodstock concert site. In the past, it is estimated that the financial impact upon the County, Town and State to provide emergency services and temporary facilities to handle such an event, is in the several hundred thousand dollar level. Such events can reoccur.

Power failure - Power Failure is not an easy hazard to profile. Due to the fact that human beings rely so highly on electricity, the loss of such can easily disrupt many daily activities. Emergency services would not function at full power due to the many electrical devices that they rely on in emergency situations such as radios, dispatching equipment, computers, etc. The Sullivan County economy would suffer as workers would no longer be able to complete their tasks without computers, office equipment, etc. This hazard is reported as the hazard having the most potential impact on Sullivan County. The two major companies responsible for power distribution in Sullivan County are Central Hudson Gas and Electric and New York State Electric and Gas.

The frequency of occurrence of a significant power failure is approximately once a year and usually with a duration of less than a single day (24 hours). One event occurred in November of 2002, where power was lost for as long as up to five days in various areas of the County. This event was due to freezing rain in combination with an ice storm.

Estimations of potential losses range from simply an inconvenience to some residents, to huge economic losses for the utility companies doing the repair. Although accurate figures were not found to be available to assess the cost of power outages, disruption of services, spoiling of food and loss of work production could range from the hundreds of thousands to a million dollars.

The following recent event of power outage was declared a Federal Disaster:

FEMA-3186-EM, New York

Incident Period: August 14-16, 2003

FEMA intends to provide appropriate supplemental assistance for required emergency measures, authorized under Title V of the Stafford Act to save lives, protect property, and public health and safety, or to lessen or avert the threat of a catastrophe in the designated areas. Specifically, FEMA is authorized to provide emergency protective measures, (Category B) under the Public Assistance program at 75 percent Federal funding. This assistance is for all counties in the State of New York.

Structural Fires - Structural Fires are quite common to Sullivan County. Though, as you have seen for Wildfires, Sullivan County is in a Low Observed Fire Danger Class. This hazard is a man-made hazard generally caused by neglect and/or accidents. In a review of newspapers from the last few years, structural fires, on average, tend to occur every few months. These fires are generally residential fires on homes that average in value of approximately \$95,000. If six homes, of average value, burned down completely, this would estimate to be an annual expense of nearly \$600,000. This figure does not include the numerous minor fires that may occur on a monthly, or even bi-monthly basis. A decent estimate of annual expenses including the minor fire expenses would be somewhere around \$750,000.00.

The potential impact of this hazard is injury, death, damage or loss of private property, and cost of manpower or resources to put the fires out.

Tornadoes are much easier to profile. The occurrences of tornadoes are typically documented for the most part. Using data collected from FEMA and using ESRI software, tornadoes on average, occur every 8 years in Sullivan County. Though the occurrences are

infrequent, the impacts can be great. Sullivan County is in Wind Zone II (160 mph) and located within a hurricane susceptible region of the United States. There are one to five recorded tornadoes per 1,000 square miles in Sullivan County, based on NOAA, Storm Prediction Center Statistics. Tornadoes can either come through neighborhoods and miss everything, or other times millions of dollars worth of damages can occur. A quantitative value cannot be determined for this hazard. Estimations of hundreds of millions of dollars worth of damage can be assumed for heavily populated and well developed areas and estimations of millions of dollars worth of damages can be assumed for smaller less populated areas, similar to Sullivan County. **A list of known Sullivan County Tornado events is listed below.**

<u>Date</u>	<u>Hour</u>	<u>Deaths</u>	<u>Injuries</u>	<u>F Scale</u>
May 9, 1961	1810	0	4	F2
June 9, 1972	1615	0	2	F2
June 16, 1986	1115	0	2	F1
Nov. 16, 1989	1040	0	0	F1
Oct. 13, 1990	1235	0	0	F1

* The above list is courtesy of www.tornadoproject.com/alltorns/nytorn.html

Transportation Accidents can occur at any time. There are generally, two to three major accidents a year that prove to be fatal in Sullivan County. Damages include: loss of life, bodily damages, car damages, structural damages, etc. Transportation accidents give no warning and generally last no more than a few hours in duration. As per the Sullivan County Democrat, in March of 2000, a single car accident occurred on Route 17B just East of Hortonville. A 1994 Cavalier was completely totaled and the driver was left with minor injuries. This incident left damages of about \$10,000, however, more severe accidents do occur.

As previously mentioned, traffic accidents resulting in the discharge of hazardous materials as, oil, gasoline and other materials are a high concern to the Towns and Villages. These are further discussed in the Hazmat subsection of Section 2.2.

Winter Storms - Winter storms have impacted the whole County. The warning is similar to that of an ice storm and can be found in the same manner, by way of weather reports. The Blizzard of 1996, combined with flooding that followed, hit the Appalachians, Mid-Atlantic, and the Northeast of the United States (including Sullivan County) and drew a total of over \$3.0 billion dollars in damages. This storm also accounted for 187 deaths, as per information obtained from the National Climatic Data Center. In general, damages can estimate anywhere from thousands of dollars to billions of dollars, as in the above event.

In the Section of 2.2 entitled “Floods”, information is provided concerning the 1996 and 2000 winter storms, that through excessive precipitation major flooding and consequential structural damages occurred. Snow storms have also exerted major impacts on the County, Towns and Villages.

The following events which occurred recently are examples of major snow events.

FEMA-3184-EM, New York

Incident Period: February 17-18, 2003

Public Assistance (assistance to State and local governments for the repair or replacement of disaster-damaged public facilities is provided to Sullivan County. Costs were not available at the time of the writing of this plan.

FEMA-3173-EM, New York

Incident Period: December 25-26, 2002 and January 3-4, 2003

FEMA intends to provide assistance for emergency protective measures (Category B) under the Public Assistance program to save lives, protect public health and safety, and property. This emergency assistance will be provided for a period of 96 hours for Sullivan County.

A total of \$897,750 was obligated to applicants in Sullivan County including \$119,682.71 for the County of Sullivan, as per information provided by SEMO.

As per the NWS, fifty-five (55) winter storm events occurred between 1993 and 2002. This calculates to a frequency of occurrence of 5.5 annual winter storm events. These events are widespread throughout the County and usually last one (1) to two (2) days. The costs involved with winter storms involves the repairs to damaged structures, loss of utilities, snow removal equipment maintenance and man-power for snow removal. Actual costs can range from the thousands to millions depending upon severity, duration and nature of the event.

2.3 IDENTIFY ASSETS

Similar to most communities, Sullivan County and its Towns and Villages have numerous critical facilities. These include but are not limited to the E 911 Emergency Center, schools, fire departments, hospitals medical centers, County and Town highway garages, government agencies, Town and Village Halls, police departments, local operational offices for telephone and electrical power utilities, airports, water supply facilities, waste water treatment facilities, etc. For the purpose of the preparation of this planning document a list of these facilities was prepared using information provided by the County, Towns and Villages. This list is presented in Appendix B which provides the name of each facility and its location. In all there are approximately 230 facilities which the Towns and Villages consider as being critical to their communities. In addition, information regarding these facilities was obtained via public input that was provided at the second public meeting that was held on March 18, 2003. This listing has been provided as an appendix section to the plan.

With respect to risk assessment, the facilities which are located near or adjacent to water bodies would be at a higher risk than other facilities. Most of the critical facilities are not located in a manner to be impacted by flood waters. However such facilities as water treatment and supply facilities which utilize surface water for supply and wastewater treatment plants that discharge into adjacent waters, are by nature more susceptible to flood and water related damages. Even so, normally such facilities as wastewater treatment plants are designed to operate for certain flood conditions (but naturally no planning can accommodate all instances).

Other than for water and wastewater treatment systems, no critical facilities were

indicated to be located in an area where greater risk would occur, as compared to if located in any other reasonably sited location in the County. Therefore, for the purpose of the plan at this time, no special consideration is needed for critical facilities.

A set of tables has been inserted into Appendix D to show the Top 15 Hazards of the County, Towns & Villages (Table D-1), the types of Impacted Facilities and the Geographic Areas that can be potentially impacted (Table D-4) due to the listed hazards. The lists will be updated as necessary, as the plan is updated. Also worth noting, as per the U.S. Census Bureau (Census 2000), of the 44,730 total housing units in Sullivan County, 20,145 units were built prior to 1960 (at minimum 44 years old), this is more than 45 %. This reveals that many of the units may be more susceptible to being impacted by an ice storm, winter storm, windstorm, etc. Also, again worth noting, the median value of a housing unit in Sullivan County is \$93,300 (Census 2000). Therefore, if .1 % (or 44.73 total housing units) were impacted by a storm, \$4,173,309 worth of damages are possible.

The degree to which public and private assets are damaged due to the various natural hazards is quite variable. The hazard which has the most specific data with respect to damages is that of floods. In Section 2.2, Floods, the overall costs due to several floods are well documented. In addition to the information provided in Section 2.2, Appendix F provides specific information on damages caused to both public and private assets due to a typical major winter storm. The information in Appendix F provides fine detail in this area as an example of what and when can be impacted by a disaster event. Although this event (December 17, 2000) was

devastating to the community, no appreciable federal or state funding came to the aid of the victims of this event. As shown in the Appendix F information, basements, bridges, roads, stream banks, buildings, vehicles, personal property, parking areas and recreational areas have been damaged by winter storms. This information is for a specific example only. Floods have been the biggest issue impact the County and each of its jurisdictions.

The following provides an estimated dollar figure for losses associated with each hazard. These costs were developed on the basis of past historic information and the use of engineering judgement. The list provided represents a range of costs for a small to large event.

NATURAL HAZARDS: RANGE OF POTENTIAL DAMAGES (\$)

	<u>Private Sector</u>	<u>Public Sector</u>
Dam Failure	\$1,000 - \$5,000	\$1,000,000
Drought	\$10,000 - \$100,000	Not known at this time
Earthquake	Not known at this time	Not known at this time
Floods	\$118 - \$3,000,000	\$2,000,000 - \$7,000,000
Hail Storm	\$100 - \$25,000	Negligible
Hurricanes *	Insufficient data	Insufficient data
Ice James	No known losses	No known losses
Landslides	Insufficient data	\$2,000 - \$500,00 **
Tornadoes **	\$10,000 - \$10,000,000	\$0 - \$10,000,000

Winter Storms * \$118 - \$3,000,000 \$2,000,000 - \$7,000,000**

*** May be similar to flood damages, no specific cost data is available.**

**** Speculative as no data is available regarding the level of damages due to past events was found.**

***** Winter Storms resulting in flooding due to quick thaw have the same impacts as floods.**

2.4 ANALYZING DEVELOPMENT TRENDS

Trends as to the type and extent of development need to be considered during the assessment of hazards. Development can increase or decrease risks and can introduce new hazards to contend with. Generally the past development of the County centered around tourism, secondary and primary homes and light commercial businesses. Due to limitations in water supply and waste disposal, heavy industrial development does not appear likely. Hence continued light commercial development is expected to continue. (i.e. warehousing, shopping centers, etc.).

As reflected in the current growth trend which is manifesting itself from the Southern portion of the County; as housing in Orange County continues to be more expensive than in Sullivan County, residential growth into Sullivan County will continue. Also, the event of Casino Gaming will continue to propagate tourism as a resort area which will lend itself to second home growth as well.

As can be expected, the population growth will expose more people to the hazards which arise in the County. However, this is felt to be at a status quo with the rest of New York, and is not expected to have a significant effect on the strategy needed for pre-

disaster mitigation efforts. Future updates of this Plan will need to ascertain if this assumption will remain appropriate. Hence, for the purposes of this Plan, development trends in Sullivan County are not at this time a factor in the decision making process for the recommendation of pre-disaster action.

Specifically with respect to the impact of growth and trends as they relate to the potential for increased impacts and cost damages in the future, the following is provided. It can be expected that growth will be adding a 2% to 4 % increase in population, and with such, a directly proportionate increase in housing stock. Hence, private sector losses could be expected to increase at the rate of 2% to 4% a year on average. Additional private sector losses may occur due to a 1% to 2% increase in commercial activity which may follow along with the growth of population.

With respect to public sector losses we would not expect as great of an increase as may occur within the private sector. Hence, a .5% to 1% increase in public sector losses per year at most may occur. The lesser growth in loss rate within the public sector is anticipated as the growth of public facilities is expected to lag private sector growth.

In response to attributing such losses to the natural hazards, the percentages should be applied to the information provided in Section 2.3 that provides the potential damage costs. The percentages should be provided equally to any of the hazards described in Section 2.3.

The location of these additional damages which will go hand-in-hand along with growth are expected to be distributed uniformly throughout the Towns and Villages. This assumption is made as the growth in the County, on average, is expected to be uniform in nature.

2.5 RANKING OF RISKS AND PRIORITIZING OF GOALS

As mentioned in the section entitled “1. Planning Process”, the County’s SCEMP/LEPC Committee utilized the State’s HAZNY computer program to assess risks on a County-wide basis. Table 2 summarizes the results of the County-wide analysis of the twenty-six hazards. A questionnaire asking the Towns and Villages to rank the hazards in their geographic area was distributed along with instructions for each community to rank the hazards from one to twenty-six, where a “1” would indicate the hazard of the most significance to the community in terms of past damages and potential damages, while a “26” would indicate the hazard with the least impact.

The results of the survey of Towns and Villages with respect to the ranking of hazards is also summarized on Table 2. In general 9 out of 10 of the top ten hazards which were indicated by the ranking accomplished by the SCEMP/LEPC committee, were on average indicated by the Towns and Villages to be on their top 10 list of hazards of concern.

Specifically the County is homogeneous with respect to impacts due to natural hazards, as all parts of the County have had an equivalent exposure to natural hazards. Table D-1, in Appendix D, summarizes the impact of the top fifteen hazards in the County.

RISK ASSESSMENT QUESTIONNAIRE RATING

Table 2

*Additional Hazard of the Village of Jeffersonville

**Based on Sullivan County's Assessment.
 ***Based on Town & Village Assessments.
 ~The column titled "Quotient" is a rounded whole integer, calculated by dividing the Town & Village Weight Rating by the number of Towns & Villages.

3. MITIGATION STRATEGY

Based upon the data and information collected during the preparation of this All Hazard/Pre-Disaster Mitigation Plan and the prioritization of hazards which was accomplished by the Towns and Villages, the elements needed for recommending strategies for implementation of the pre-disaster initiatives have been assembled. In order to maximize results using the limited resources which are available, it was agreed by the committee members who participated in the plan development, to concentrate on the top five hazards with respect to goals and actions. Hence, the five hazards that were ranked the highest in priority by the Towns and Villages were selected as the priority items to be mitigated. As several of the Towns (Delaware, Rockland, and Tusten) as well as the Villages (Bloomingburg and Monticello) indicated that Hazmat concerns are within their top five concerns, it was felt that recommendations should include this hazard as well. The following subsections describe the recommended All Hazard/Pre-Disaster Mitigation goals and the plan of action to implement measures towards goal achievement.

The prioritization of actions was found to be based upon cost, as an approach to getting the biggest bang-for-the-buck was applied. In addition by implementing mitigation actions as part of everything we do, and not as an afterthought, we hope to incorporate actions at minimal cost as these become a planned integral part of projects and the norm for operations. Funding is needed as shown in, Table D-3 in Appendix D. An elaboration of the strategy is described in section 3.2 of this plan.

A comparison of the SCEMP/LEPC listing to the Town/Village list is as follows:

<u>Rank</u>	<u>Town/Village Hazard</u>	<u>Rank</u>	<u>County Hazard</u>
1	Power Failure	1	Power Failure
2	Ice Storm	2	Structural Fire
3	Structural Fire	3	Tornado
4	Winter Storm	4	Ice Storm
5	Flood	5	Dam Failure
6	Transportation Accident	6	Winter Storm
7	Tornado	7	Hazmat-Fixed Sites
8	Hazmat-Fixed Sites	8	Flood
9	Hazmat-In Transit	9	Trans. Accident
10	Structural Collapse	10	Structural Collapse
11	Oil Spill	11	Oil Spill
12	Water Supply Failure	12	Hazmat-In Transit
13	Dam Failure	13	Ice Jam
14	Windstorm	14	Land Slide
15	Explosion	15	Water Supply Failure

The top five (5) Natural Hazards comparing the SCEMP/LEPC listing to the Town & Village list is as follows:

<u>Rank</u>	<u>Town/Village Hazard</u>	<u>Rank</u>	<u>County Hazard</u>
1	Ice Storm	1	Tornado
2	Winter Storm	2	Ice Storm
3	Flood	3	Winter Storm
4	Tornado	4	Flood
5	Windstorm	5	Ice Jam

For the purposes of this All Hazard/Pre-Disaster Mitigation Plan the Town/Village list has been adopted with respect to the priority of concerns in the County. The Town/Village list will therefore be the focus for the recommendation of goals to be discussed in Section 3.1 of the plan.

3.1 ALL HAZARD/PRE-DISASTER MITIGATION GOALS

The prime objective of goal setting is to aid in the reduction and/or the elimination of losses. In concentrating on the top five natural hazards of concern which include: Ice Storm, Winter Storm, Flood, Tornado and Windstorm; resources can be better focused for achieving progress towards minimizing impacts. Important to goal creation is to have goals that are tangible. The following is a listing of the goals which would help towards diminishing the impacts of the five natural hazards of concern. A five year time period was selected as it is the norm to have a five year plan for governmental budgeting and near range guidance towards achieving accomplishments.

GOAL #1 Reduce the Impact of Ice Storms

GOAL #2 Reduce the Impact of Winter Storms

GOAL #3 Reduce the Impact of Floods

GOAL #4 Reduce the Impact of Tornadoes

GOAL #5 Reduce the Impact of Windstorms

In addition to the above primary goals to minimize the impacts of the five naturally caused disasters, a sixth goal was determined to be necessary to address the man-made hazmat disaster of hazardous materials in transit. This is necessary due to the strong concerns expressed by the Public as well as each participating local government. Therefore the following sixth goal is to:

GOAL #6 Reduce the Impact of the following man-made hazards:

- **Power Outage**
- **Structural Fire**
- **HAZMAT**

3.2 PLAN OF ACTION

As much work will be necessary to make progress towards achieving the goals, a five-year program will be established to implement the work needed. This section outlines what specific work would be undertaken towards providing action with respect to the goals. In addition this section also describes the responsible parties for forming the work. To more clearly depict the responsible parties with regard to each goal please review Table D-2 labeled “Responsibilities” in Appendix D.

In addition, the plan will be implemented through the existing programs and budgeting process in the expediting of capital improvements. Table D-3 entitled “Upcoming Projects” in Appendix D lists upcoming projects in the next five (5) years that the County, Towns & Villages plan on participating in. These projects or “actions” include culvert upgrades, bridge repairs and replacements, upgrades to existing structures, all of which will help reduce the impact of various hazards. In particular flood impacts would be reduced due to improved hydrants and the use of flood proof structures.

Table D-2 illustrates the responsible parties for each jurisdiction which has participated in this plan for implementing work towards making progress with respect to the goals. With respect to the County, the SCEMP/LEPC Committee will both coordinate the efforts by the County and also, obtain the input from the Towns & Villages. The County, Towns and Villages will incorporate work completed for the implementation of the goals into the zoning and building regulations that are implemented by each.

Table 3 describes the five goals that were recommended for action along with specific actions to be implemented. As previously mentioned in Section 3.1, the actions are

primarily implementable through the use of existing budgets that are available in the County and in each Town and Village. Where capital projects need additional funding such needs are mentioned in Table D-3 of Appendix D.

We therefore use the available budgets of administration, building departments, planning departments and the County SCEMP/LEPC to put into action public education, building code enforcement, etc.

ALL HAZARD/PRE-DISASTER MITIGATION PLAN ACTION PLAN

Table 3

	<u>GOAL</u>	<u>ACTION</u>	<u>COST</u>
#1	<u>Reduce the Impact of Ice Storms</u>	<ul style="list-style-type: none"> · Continue to maintain the proper building codes and to make sure that these codes are enforced. 	Budgeted, No Additional**
#2	<u>Reduce the Impact of Winter Storms</u>	<ul style="list-style-type: none"> · Continue to maintain the proper building codes and to make sure that these codes are enforced. 	Budgeted, No Additional**
#3	<u>Reduce the Impact of Floods</u>	<ul style="list-style-type: none"> · Encourage homeowners to buy flood insurance to protect belongings. · Promote the review of Flood Insurance Rate Maps (FIRM) prior to new development in certain flood prone areas. · Educate the Community about flooding, specifically types of areas where flooding occurs, causes of flooding, etc. · Modify, repair or replace bridges, drainage, piping, etc. 	Town/Village Announcements** Building Inspectors** Cost Undetermined See Table D-3**
#4	<u>Reduce the Impact of Tornadoes</u>	<ul style="list-style-type: none"> · Distribute information about Tornadoes, discussing how to build a home to withstand this hazard. · Considerations will be taken to retrofit structures to strengthen the structure. 	Cost Undetermined Implemented through Building Permits**
#5	<u>Reduce the Impact of Windstorms</u>	<ul style="list-style-type: none"> · Continue to maintain the proper building codes and to make sure that these codes are enforced. 	Budgeted, No Additional**
#6	<u>Reduce the Impact of Man-Made Hazards</u>	<ul style="list-style-type: none"> · Conduct meetings with the local utility companies to discuss better ways to reduce the impacts of the Power Outage hazard. · The County will construct a Fire Training Facility to educate and train the Community to prepare for Structural Fires. · Consideration will be taken to require the use of fire-retardant materials in any new constructions. · SCEMP/LEPC will conduct meetings with the Railroad to discuss HAZMAT concerns. 	Cost of Officials** County, \$2,000,000.00 Implemented through Building Permits** Budgeted, No Additional**

*Please note that all responsible parties are listed on the table titled "RESPONSIBILITIES" found in Appendix D-2.

** Budgeted routinely by County, Towns and Villages.

4. PLAN MAINTENANCE PROCEDURES

The All Hazard/Pre-Disaster Mitigation Plan will be updated by addendum at any time a **significant re-zoning of the County, a Town or a Village takes place, a change in the budget occurs, or a** major significant change has occurred to warrant such. This is not anticipated at this time except if one of the hazards which were of a lower priority manifests itself through a high degree of current damage. In this case there may become an urgent need to re-focus goals and activities. The addendum would allow for the basic plan to remain in-tact while addressing current needs.

At the end of the fourth year of the date of the Plan's acceptance by FEMA and SEMO, the Plan will start to be updated. **A meeting will be held in March of the fourth year on a date to be determined by the SCEMP/LEPC Committee.** Any addendum will be directly incorporated into the body of the Plan at that time. Prior to the passing of five years from the date of acceptance, a revised and updated plan will be submitted to SEMO for review and coordination with FEMA.

During the updating process, the Towns and Villages will be contacted to provide updated information concerning the elements of the plan. This will be done through the issuance of a questionnaire to be completed and returned to the County's SCEMP/LEPC committee. The committee will utilize the information provided on the questionnaire to update the sections of the Plan. The SCEMP/LEPC will appoint a sub-committee for the purpose of updating the plan.

Upon the completion of a draft of the updated All Hazard/Pre-Disaster Mitigation Plan, each Town and Village will be given a copy of the plan for review and comment. **Following their comments, each Town or Village will submit an Adoption Resolution**

stating their approval of the newly revised Plan. The new adoption resolutions will supercede & replace the old resolutions and will be attached to the Plan in Appendix E. Comments will be incorporated after which the draft will be made available to the public at libraries, on the County web site and at the government offices of the County, Town and Villages. A public meeting to obtain public comment on the revised plan will be held.

Subsequent to the receipt of Public comment and the incorporation of such into the plan, the updated plan will be submitted to SEMO.

COUNTY, TOWN & VILLAGE PLAN ADOPTION RESOLUTIONS

11-04

RESOLUTION NO. 105-04 INTRODUCED BY THE PUBLIC WORKS COMMITTEE TO AUTHORIZE LEGISLATIVE APPROVAL AND ADOPTION OF THE "SULLIVAN COUNTY, COUNTY, TOWN AND VILLAGE, MULTI-JURISDICTIONAL, ALL-HAZARD, PRE- DISASTER MITIGATION PLAN", WHICH WAS PREPARED BY THE SULLIVAN COUNTY DIVISION OF PUBLIC WORKS

WHEREAS, the Sullivan County Legislature by Resolution 145-03 authorized the County Manager to enter into an agreement with the New York State Emergency Management Office to provide funding for the preparation of the Plan; and

WHEREAS, the Division of Public Works has completed the Plan; and

WHEREAS, Title 44 Code of Federal Regulations (CFR), Chapter 1 FEMA, Part 201.6(c)(5), requires each local government participating in the preparation of a multi-jurisdictional Local Mitigation Plan to accept and adopt such plan;

NOW, THEREFORE, BE IT RESOLVED, that the Sullivan County Legislature, hereby accepts and adopts the "Sullivan County, County, Town And Village, Multi-Jurisdictional, All- Hazard, Pre- Disaster Mitigation Plan".

Moved by Mrs. LaBuda, seconded by Mr. Rouis, put to a vote, carried and declared duly adopted on motion February 19, 2004.

STATE OF NEW YORK)

§:

COUNTY OF SULLIVAN)

I, DENIESE A. HARTING, Deputy Clerk to the Legislature of the County of Sullivan, do hereby certify that I have compared the foregoing copy of a resolution with the original thereof now on file in my office and that the same is a correct transcript therefrom and of the whole of said original.

WITNESS my hand and seal of said Legislature this 19th day of February 2004.

Deniese A. Harting
DEPUTY CLERK TO THE SULLIVAN COUNTY LEGISLATURE
